Enabling IP Company Overview

Enabling IP is an Authorized Developer for Sage Timberline Office. The company has developed 2 solutions that integrate with the Timberline Office suite to provide additional value to Timberline's construction and real estate solutions.

Equipment Maintenance integrates with Equipment Cost, Payroll, Accounts Payable, Job Cost, PO/V and Service Management to complete Timberline's equipment management solution. Preventative maintenance scheduling and work order generation and tracking assure companies do not miss critical services that could devalue expensive equipment assets. Additionally the module offers an equipment planner and tracker which allows scheduling of equipment on jobs and then one step billing to the job or customer based on the time it was on a project.

Components allowing *integration between Sage Timberline Office and Sage CRM* is a unique offering of Enabling IP's. Address Book information is kept synchronized with CRM so that changes made on either side are also made on the other. AR, AP, JC, PJ, SM and PM data can be viewed in CRM allowing marketing, sales or customer account managers who don't use Timberline regularly to be able to see important information. CRM is web enabled so that this information can be made available wherever there is an internet connection.

Principals at Enabling have over 30 years experience working with Timberline applications and are uniquely suited to help companies integrate Enabling IP solutions with their Sage Timberline Office applications.
