

EarthWorks v3.20a with FASTER Calculation Is Here

From Trakware Online

SPEED, SPEED, SPEED

This newest version of EarthWorks calculates from 100% to 3500% faster than our previous 3.x versions.

In fact, the larger and more complex the drawing, the greater the speed increase!

This means no more waiting around for EarthWorks to finish its calcs on large PDF and AutoCAD takeoffs.

Other Improvements

- **DXF Export** - Proposed elevation objects can now be exported as a DXF file for import into other programs.
- **Merged Drawings and PDFs** - EarthWorks now preserves the alignment with the PDF if the merged drawing fits within the drawing screen.
- **Compressed PDFs** - Importing of compressed PDFs are now supported. Previous versions errored out when importing a compressed PDF.
- **Subgrades and "Join"** - You can now use the Join option on Subgrades, PTP lines or Proposed Areas to add Subtract Areas to a Subgrade that contains them.
- **Auto-Subtract When Cloning Subgrades** - When you clone a PTP line as a Subgrade, any closed PTP lines inside of it will automatically be added to the cloned Subgrade as Subtract areas.
- **Color Maps Are Faster** - Color Maps now draw 4X faster.
- **Data Collector Changes** - Information can now be imported to the Data Collector as either Existing or Proposed.

Getting the Update

To get the update, you must renew your EarthWorks Subscription.

You can renew your EarthWorks Subscription by credit card or by check using the following links:

EarthWorks Pro, Pro/OS or ACAD/OS users
[Renew my Earthworks Subscription](#)

EarthWorks Plus, Plus/OS or OS Only Users
[Renew my EarthWorks Subscription](#)

Once payment is made, we will send you your links to the EarthWorks 3.20a download. If you have any questions on this new version of EarthWorks or your Subscription Status, don't

hesitate to call us at (505) 275-6746 x202 or submit your questions as a Support Ticket at our [Support Center](#).
